

NOTICE OF CHLORINATION

The District will be performing its annual chlorination. We anticipate the process to take, from start to finish, 7 to 10 days. Most of the chlorine will be flushed from the water system; the flushing will occur on dead end lines. The chlorination will help clean the water system and extend the health of the system. This should not change the taste or appearance of the water quality for most, but it may for some customers with more sensitive palates. For them, the District apologizes for the inconvenience. The chlorination will occur at the Dakota 1 Well site on October 25th, 2021. This Well is located at 2160 W Dakota Ave.

If you have any questions, please contact the District office at District@haydenirrigation.com or by calling 208-772-2612.

Thank you,

Hayden Lake Irrigation District
